## DEPARTMENT OF TRANSPORTATION FEDERAL AVIATION ADMINISTRATION STANDARD

COLOR AND TEXTURE OF FINISHES
FOR
NATIONAL AIRSPACE SYSTEM EQUIPMENT

- 1. Scope This standard establishes the color and texture of the finish applied to all new National Airspace System equipment enclosures (cabinets, racks, panels, etc.) and to those existing enclosures installed in facilities which are undergoing major modernization/relocation with the exception of buildings, structures, antennas, engine-generators, power plants, substations and other ancillary structures.
- 2. Purpose The purpose of this standard is to provide a National Airspace System equipment finish, standardized as to color and low reflectance properties, at all design, development, and contractor levels, to ensure uniformity on a systemwide basis.
- 3. Equipment Finish
- 3.1 New Equipment The finish of all new equipment enclosures shall be of a smooth texture, lusterless, brown color matching No. 30372 of Federal Standard 595, Colors.
- 3.2 Existing Equipment Collocated equipment in manned air traffic control facilities shall be finished, during major modernization/relocation projects, in accordance with Paragraph 3.1, above. Application should be in accordance with FAA-STD-Ol2, Application of Paint.
